د.محمد عبدالله الروحاني

- 1) 1. A removable appliance designed to be removed from the mouth by:
 - 1) - A. doctor
 - 2) - B. Technician
 - 3) + C. Patient
 - 4) - D. Parent
- 2) 2. Removable appliance:
 - 1) - A. It not should be damaged by oral secretions.
 - 2) - B. It must not impede normal development of teeth.
 - 3) + C. A & B
 - 4) - D. Non-of the above
- 3) 3. The active components of the removable appliance are: (all of the following are correct) EXCEPT
 - 1) - A. Bows
 - 2) - B. Springs
 - 3) - C. screws
 - 4) + D. Clasps
- 4) 4. It provides framework to hold clasps and springs in position and also anchorage:
 - 1) + A. Base plate
 - 2) - B. Screw
 - 3) - C. Bow
 - 4) - D. elastic
- 5) 5. It provides Mandibular repositioning:
 - 1) + A. Construction or working bite
 - 2) - B. oral screen
 - 3) - C. Screw
 - 4) - D. shields
- 6) 6. The Skeletal effect of functional appliance is by:
 - 1) - A. Stimulation of backward maxillary growth
 - 2) + B. Stimulation of forward mandibular growth
 - 3) - C. Retroclination of the Upper teeth
 - 4) - D. Proclination of the Lower teeth
- 7) 7. Basic classification of functional appliances are: Removable functional appliances and fixed functional appliances
 - 1) + A. True
 - 2) - B. False
- 8) 8. The Dento-alveolar effects of functional appliance is by:
 - 1) - A. Stimulation of forward mandibular growth
 - 2) - B. Stimulation of backward mandibular growth
 - 3) + C. Retroclination of the Upper teeth and Proclination of the Lower teeth
 - 4) - D. Non-of the above
- 9) 9. Functional appliances harness natural forces and derive them from:
 - 1) - A. Bows
 - 2) + B. The oro-facial musculature
 - 3) - C. Clasps
 - 4) - D. Active components
- 10) 10. Who was the first practitioner to use the Monobloc functional device?

- 1) - A. Andresen
2) + B. Pierre Robin
3) - C. Proffit
4) - D. Wilhelm Balters
- 11) 11. One of Frankel's philosophies is " Periosteal pull by buccal shields and lip pad "
1) + A. True
2) - B. False
- 12) 12. The Lip pads of the Frankel (FRIL) regulator are in the maxillary arch.
1) - A. True
2) + B. False
- 13) 13. A functional appliance may be defined as "one that changes the posture of the mandible holding it open and forward.
1) + A. True
2) - B. False
- 14) 14. "CONSTRUCTION BITE". This is done to improve the skeletal inter-jaw relationship.
1) + A. True
2) - B. False
- 15) 15. Activator was designed by:
1) + A. Andresen
2) - B. Pierre Robin
3) - C. Proffit
4) - D. Wilhelm Balter
- 16) 16. BIONATOR a less bulky appliance, and it can be worn at night-time.
1) + A. True
2) - B. False
- 17) 17. The upper part of "TWIN-BLOCK", Bite blocks on the posterior teeth:
1) + A. Extending on first molar and second premolar and ending with an inclined plane anteriorly
2) - B. Extending on premolars and ending with an inclined plane anteriorly
3) - C. Extending on first molar and second premolar and ending with an inclined plane posteriorly
4) - D. Extending on premolars and ending with an inclined plane posteriorly
- 18) 18. The lower part of "TWIN-BLOCK", Bite blocks on the posterior teeth:
1) - A. Extending on first molar and second premolar and ending with an inclined plane anteriorly
2) - B. Extending on premolars and ending with an inclined plane anteriorly
3) - C. Extending on first molar and second premolar and ending with an inclined plane posteriorly
4) + D. Extending on premolars and ending with an inclined plane posteriorly
- 19) 19. The "TWIN-BLOCK" became popular due to:
1) + A. Less bulk, therefore, better patient compliance
2) - B. it is bulky nature, therefore, better patient compliance
3) - C. The appliance is to be worn: 14 hours/day
4) - D since it would interfere with; speaking, eating, and respiration during physical exertion.
- 20) 20. The "TWIN-BLOCK" is to be worn:
1) - A. 5 - 6 hours a day
2) - B. 10 hours a day
3) - C. 14 hours a day
4) + D. Full time
