### Dynamics

I. Course Identification and General Information:						
1.	Course Title:	Engineering Mechanics – Dynamics				
2.	Course Code & Number:	BR006				
3.	Credit hours:	C.H				TOTAL CR. HRS.
		Th.	Seminar/Tu.	Pr	Tr.	
		2	-	2	-	
4.	Study level/ semester at which this course is offered:	First Year – Second Semester				
5.	Pre –requisite (if any):	Engineering Mechanics - Statics				
6.	Co –requisite (if any):	Mathematics				
7.	Program (s) in which the course is offered:	Mechanical Engineering				
8.	Language of teaching the course:	English				
9.	Location of teaching the course:	Mechanical Engineering Department				
10.	Prepared By:	Prof.Dr.Eng. Mohammed Ahmed Al-Bukahiti				
11.	Date of Approval					

### II. Course Description:

Dynamics is that branch of mechanics, which deals with the motion of bodies under the action of forces. This course provides fundamental concepts for most of engineering branches. The knowledge and abilities taught in this course are an essential prerequisite for subsequent courses involving dynamics; in particular mechanics of machines, machine design, and system dynamics and vibration. The course focuses on the physical/mathematical analysis of the kinematics and kinetics motion of particles. The formulation and solution of mechanics problems will help the students **develop** the ability of logical thinking and effective communication. A thorough comprehension of dynamics

will provide one of the most useful and powerful tools for analysis in engineering. In each chapter, the complete theory and the method of analysis will be introduced in the beginning followed by solved examples and assignments.

III. Course Intended learning outcomes (CILOs) of the course		Referenced PILOs
a1	Understand and explain basic kinematics and kinetics concepts such as displacement, velocity, acceleration, relative motion, force, impulse and momentum, work and energy.	A1
a2	Express dynamic quantities as vectors in terms of Cartesian components, polar coordinates, and normal-tangential coordinates.	A4
b1	Identify the appropriate tools and analytical methods in solving the practical problems of dynamics.	B1
c1	Solve and discuss kinematics and kinetics problems involving rectilinear and curvilinear motions of particles.	C1
d1	Develop logical and creative thinking by defining their own methodologies for problem solution.	D1
d2	Use appropriate technology to retrieve, manage, analyze, and present information.	D5

### IX. Course Policies:

1.	<b>Class Attendance:</b> -A student should attend not less than 75 % of total hours of the subject; otherwise he will not be able to take the exam and will be considered as exam failure. If the student is absent due to illness, he/she should bring <b>an approved</b> statement from university Clinic
2.	<b>Tardy:</b> - For late in attending the class, the student will be initially notified. If he repeated lateness in attending class he will be considered as absent.
3.	<b>Exam Attendance/Punctuality:</b> - A student should attend the exam on time. He is Permitted to attend an exam half one hour from exam beginning, after that he/she will not be permitted to take the exam and he/she will be considered as absent in exam.
4.	<b>Assignments &amp; Projects:</b> - The assignment is given to the students after each chapter; the student has to submit all the assignments for checking on time.

## II. Course Description:

This course is designed to develop the communicative performance of Engineers who wish to improve their abilities in English when dealing with their staff, other managers, suppliers, external colleagues and other Engineers internally or internationally as needed, with the correct vocabulary, phrasing, appropriateness, context and style. The role of Technical English language on modern engineering education will be targeted. Most students need to write essays and reports for course work. Yet writing good academic English taking into account the terminologies is one of the most demanding tasks students face. Our English for Engineer courses can focus on widening the student's knowledge of engineering terminology or equally on building their confidence in using the correct language for the situation at hand. Before this context the students should be aware of Academic English taking into account the approach of writing using grammatical and structure of the grammar. After completing this **course**, students will be able to understand and apply the most common technical vocabulary in the area of Mechanical Engineering.

## III. Alignments of the Course Intended learning outcomes (CILOs)

## Referenced PILOs

a1	Classify general principles of academic writing and scientific techniques using basic grammar.	A2
a2	Express the main ideas related to the topics of writing with effect vocabulary.	A4
b1	Examine the effect of scientific writing in the management process using best essays.	B3
c1	Apply different techniques for writing a report in the area of Mechanical Engineering with special terminologies.	C1
d1	Assess to time factor for completion of different processes required in this course.	D4
d2	Cooperate effectively within the team in presenting the technical reports.	D5
