# **II.Course Description:**

The course provides strong foundation on analog and digital signals, and systems analysis which is necessary for creating good foundations in analyzing, interpreting, and evaluating the performance of basic Mechatronics Systems. The students will learn the basic Analog and discrete time signals, Analog and discrete time systems. Students will understand the application of various mathematical transforms techniques (Laplace, Fourier analysis, and Z-Transform) for signals analysis and system designs both continuous time and discrete time. Students will be introduced to the conversion from analog to digital and vice versa (ADC and DCA) techniques and to the design and analysis of digital filters.

MATLAB is a required software package for this course. Students who will be studying the course must have installed the package on their laptops. The student version of MATLAB is available online atwww.mathworks.com

|     | III.Course Intended learning outcomes (CILOs) of the   | Referenced |
|-----|--|------------|
|     | course   | PILOs      |
| a1. | Depict knowledge and understanding of the theoretical and mathematical aspects of analog and digital signals relevant to Mechatronics Engineering. | A1         |

Republic of Yemen Ministry of Higher Education & Scientific Research Council for Accreditation & Quality Assurance

| a2. | Describe an understanding of the fundamental properties of linear systems<br>and their mathematical models required to calculate, analyse, estimate, study<br>the response of such systems and evaluate their stability | A2     |
|-----|---|--------|
| b1. | Analyze results achieved by mathematical solutions and computer simulation to evaluate the behavior of basic mechatronic systems.   | B1, B2 |
| b2. | Compare between alternative mathematical technics used in signal and system analysis and select the appropriate one according to the needed specifications.   | B2     |
| c1. | Apply the Sampling theorem i time and frequency domain analysis.  | C2     |
| c2. | Implement basic Matlab and Simulink tools for analysis and simulation of continuous and discrete-time systems.  | C2     |
| d1. | Estimate student's cooperative work though efficient team works.  | D1     |
| d2. | Examine presentations and students communication skills.  | D6     |

### V.Teaching strategies of the course:

- Active Lectures.
- Tutorials.
- The Use of Computer and Web-Based Learning.
- Directed Self Study.
- Group Learning and Problem Based Learning.
- Laboratory Works.
- Self and Cooperative Learning.
- Dialogue, Discussion and Class Activities.
- Analysis and Problem Solving.
- Project Work.
- Design Exercises.
- Simulation Tools (Matlab with Simulink).
- Brainstorming.

### **III.Course Description:**

The course provides strong foundation on analog and digital signals, and systems analysis which is necessary for creating good foundations in analyzing, interpreting, and evaluating the performance of basic Mechatronics Systems. The students will learn the basic Analog and discrete time signals, Analog and discrete time systems. Students will understand the application of various mathematical transforms techniques (Laplace, Fourier analysis, and Z-Transform) for signals analysis and system designs both continuous time and discrete time. Students will be introduced to the conversion from analog to digital and vice versa (ADC and DCA) techniques and to the design and analysis of digital filters.

Head of the Quality Assurance Dean of the Academic Development Department Unit Faculty Center & Quality Assurance Rector of Sana'a University Assoc. Prof. Assoc. Prof. Dr. Prof. Dr. Assoc. Prof. Dr. Huda Al-Prof. Dr. Al-Qassim Mohammed Abbas Dr. Abdul-Mohammad Mohammed AL-Emad Malik Momin Algorafi Bukhaiti

MATLAB is a required software package for this course. Students studying the course must have installed the package on their laptops. The student version of MATLAB is available online atwww.mathworks.com

| Ι   | V.Course Intended learning outcomes (CILOs) of the  | Referenced |
|-----|---|------------|
|     | course  | PILOs      |
| a1. | Depict knowledge and understanding of the theoretical and mathematical aspects of analog and digital signals relevant to Mechatronics Engineering.  | A1         |
| a2. | Describe an understanding of the fundamental properties of linear systems<br>and their mathematical models required to calculate, analyze, estimate,<br>study the response of such systems and evaluate their stability | A2         |
| b1. | Analyze results achieved by mathematical solutions and computer simulation to evaluate the behavior of basic mechatronic systems.   | B1,<br>B2  |
| b2. | Compare between alternative mathematical technics used in signal and system analysis and select the appropriate one according to the needed specifications.   | B2         |
| c1. | Apply the Sampling theorem i time and frequency domain analysis.  | C2         |
| c2. | Implement basic Matlab and Simulink tools for analysis and simulation of continuous and discrete-time systems.  | C2         |
| d1. | Estimate student's cooperative work though efficient team works.  | D1         |
| d2. | Examine presentations and students communication skills.  | D6         |

|    | X. Course Policies:  |
|----|--|
| .1 | Class Attendance:<br>The students should have more than 75 % of attendance according to rules and regulations of<br>the faculty.   |
| .2 | Tardy:<br>The students should respect the timing of attending the lectures. They should attend within 1<br>minutes from starting of the lecture.   |
| .3 | <b>Exam Attendance/Punctuality:</b><br>The student should attend the exam on time. The punctuality should be implemented according<br>to rules and regulations of the faculty for midterm exam and final exam. |
| .4 | Assignments & Projects:<br>The assignment is given to the students after each chapter, the student has to submit all the<br>assignments for checking on time.  |
| .5 | <b>Cheating:</b><br>If any cheating occurred during the examination, the student is not allowed to continue and he/she has to face the examination committee for enquiries.                                    |
| 6. | Plagiarism:<br>The student will be terminated from the Faculty, if one student attends the exam on another<br>behalf according to the policy, rules and regulations of the university.                         |
| 7. | - All the teaching materials should be kept out the examination hall.<br>-The mobile phone is not allowed during classes and exam periods.<br>-There should be a respect between the student and his teacher.  |
