

## 32. Course Specification of Mechanics of Materials-II

I. Course Identification and General Information:						
1.	Course Title:	Mechanics of Materials – II.				
2.	Course Code & Number:	ME234.				
3.	Credit hours:	C.H			TOTAL CR. HRS	
		Th.	Seminar/T u.	Pr		Tr.
		2	2	-	-	3
4.	Study level/ semester at which this course is offered:	Third Year-First Semester.				
5.	Pre –requisite (if any):	ME111 & ME131.				
6.	Co –requisite (if any):	None.				
7.	Program (s) in which the course is offered:	Mechanical Engineering Program.				
8.	Language of teaching the course:	English Language.				
9.	Location of teaching the course:	Mechanical Engineering Department.				
10.	Prepared By:	Associate Prof. Dr. Khalil Al-Hatab.				
11.	Date of Approval:					

II. Course Description:
<p><b>This course is an</b> extension of the theories and applications of the principles of mechanics of materials taught in Mechanics of Materials-I. This course introduces the concepts, equations and methods used to perform stress, strain and displacement analysis of an elastically deformed body and is essential to the design function. The course covers the following topics: analysis of stress and strain, generalized Hooke's law, combined loading and static failure criteria, deflection of beams, buckling of columns, thick-walled cylinders and rotating disks.</p>

III. Alignments of the Course	Intended learning outcomes (CILOs)	Referenced PILOs
a1	Depict an advanced and applied background knowledge developed in the physical, mathematics, sciences and engineering to solve real world	<b>A1.</b> Demonstrate knowledge & understanding of Mathematics, Science, and Engineering relevant to Mechanical Engineering.

Head of  
 Department  
 Asst. Prof. Dr.  
 Adel Ahmed  
 Al-Shakiri

Quality Assurance  
 Unit  
 Assoc. Prof. Dr.  
 Mohammad  
 Algorafi

Dean of the Faculty  
 Prof. Dr. Mohammed

 University  
 Prof. Dr. Al-Qassim  
 Mohammed Abbas

	problems related to stress analysis and design area.	
a2	Illustrate knowledge developed in the mechanics of materials to solve open-ended problems that contain superfluous or insufficient information and require development of additional data for stress analysis function.	A2. Clarify general principles of design, design techniques, and characteristics of engineering materials and components.
a3	Identify modern knowledge tools, analytical skills, software packages (i.e., SolidWorks, Abaqus, ...etc.) and graphical method in the elementary solutions to the problems within more complex geometries, loading and boundary conditions.	A4. Understand knowledge tools and analytical skills in solving problems relevant to Mechanical Engineering
b1	Integrate background knowledge to identify, formulate, analyses and solve problems relevant to structural machine members such as: shafts, beams, columns, thick-walled cylinders and rotating disk.	B1. Apply the principles of engineering, basic science and mathematics to model, analyze, design, and realize physical systems, components or processes in innovative ways.
b2	Analyze stresses and strains at point in 2D and 3D, calculate tangential, radial, and longitudinal stresses and determine slope deflection and critical buckling load.	
b3	Examine stress analysis and design the mechanical components taking into account three realistic mechanical concerns: strength (factor of safety, static failure theories), stiffness (maximum allowable deflection) and stability (critical buckling load).	B2. Design the Mechanical systems or processes within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability.
c1	Apply skills in using the most widely applied commercial software packages (Fortran, SolidWorks & ABAQUS) and some of its advanced functions.	C1. Use the various techniques, skills, equipment and modern engineering tools and methods necessary for Mechanical Engineering practice.

Head of Department  
 Asst. Prof. Dr. Adel Ahmed Al-Shakiri

<b>c2</b>	Interpret the graphical method to compute and construct the slopes and deflections, Mohr's circle and illustrate stress variations over the cross-section of the members.	
<b>c3</b>	Prescribe technical reports that describe the context and significance of the stress analysis of real-world problems and the procedures/methods used to solve them and apply the results for the services.	<b>C2.</b> Conduct experiments; analyze data and present results for various mechanical systems.
<b>d1</b>	Cooperate in groups and function on multi-disciplinary teams.	<b>D1.</b> Show capability to work in stressful environments, work productively within a team and possess leadership skills.
<b>d2</b>	Review searches of literature for a real-world problem, select the project idea, use databases and analytical and computing skills tools as well as, evaluate information and evidence from various sources.	<b>D4.</b> Perform searches of literature, use databases, as well as, evaluate information and evidence from various sources.
<b>d3</b>	Assess to share ideas and to communicate and present scientific results effectively with other in both oral and written format through the practice of performing presentations and technical reports.	<b>D5.</b> Communicate effectively both orally and in writing technical reports.

<b>(A) Alignment Course Intended Learning Outcomes of Knowledge and Understanding to Teaching Strategies and Assessment Strategies:</b>		
Course Intended Learning Outcomes	Teaching strategies	Assessment Strategies
<b>a1-</b> Depict an advanced and applied background knowledge developed in the physical, mathematics, sciences and engineering to solve real world problems related to stress analysis and design area.	Lectures, tutorials seminars	Examinations, homework presentations

<b>I. Course Policies:</b>	
<b>1</b>	<b>Class Attendance:</b> - The student should be attending not less than 75% of total contact hours of the subject, otherwise he will not able to take exam and <b>be considered</b> as an exam failure. If the student is absent due to illness, he/she should bring <b>an approved</b> statement from university Clinic.
<b>2</b>	<b>Tardy:</b>

Head of Department  
 Asst. Prof. Dr. Adel Ahmed Al-Shakiri

Quality Assurance Unit  
 Assoc. Prof. Dr. Mohammad Algorafi

Dean of the Faculty  
 Prof. Dr. Mohammed AL-Bukhaiti

Academic Development Center & Quality Assurance  
 Assoc. Prof. Dr. Huda Al-Emad

Rector of Sana'a University  
 Prof. Dr. Al-Qassim Mohammed Abbas

	- For <b>lateness</b> in attending the class, the student will be initially <b>notified</b> . If he <b>repeats</b> late in attending class <b>he will be considered absent</b> .
3	<b>Exam Attendance/Punctuality:</b> - The student should attend the exam on time. He is <b>permitted</b> to attend the exam half one hour from exam beginning, after that he/she will not <b>be</b> permitted to take exam and he/she <b>is considered</b> absent in <b>the</b> exam.
4	<b>Assignments &amp; Projects:</b> - In general one assignment is given after each chapter of a course. The student should submit the assignment on time, mostly one week after <b>giving</b> the assignment
5	<b>Cheating:</b> - For cheating in exam, the student <b>is</b> considered as <b>failure</b> . <b>In case</b> the cheating <b>is</b> repeated three times during study the student will <b>be disengaged</b> from the Faculty
6	<b>Plagiarism:</b> Plagiarism is the attending of the student the exam of a course instead of other student. If the examination committee <b>proved</b> a plagiarism of a student, he will be disengaged from the Faculty. The final disengagement of the student from the Faculty should be confirmed from the Student <b>Affair Council</b> of the university.
7	<b>Other policies:</b> - The mobile phone is not allowable <b>to be used</b> during class lecture. It must <b>be switched off</b> , otherwise the student will <b>be ordered</b> to leave the lecture room. - The mobile phone is not allowed <b>to be taken during the examination time</b> . - Lecture notes and assignments <b>may be</b> given directly to students using soft or hard copy.
