

قائمة الاسئلة

إدارة دواجن - (AP223) - المستوى الثاني - قسم طب بيطري - النظام الدراسي :- كلية الطب البيطري - الفترة الثانية- درجة الامتحان (50)

ا.د.م غازي علي زهير

- 1) Poor biosecurity on commercial farms:
 - 1) - One of the strong points of Yemen poultry industry
 - 2) The most important weak point of poultry industry in Yemen
 - 3) - One of infrastructure of Poultry Industry
 - 4) - All options are incorrect.
- 2) Which one is a Broiler purpose breed of poultry?
 - 1) - Hysex
 - 2) - New Hampshire
 - 3) Cobb
 - 4) - Hyline
- 3) Adult female poultry that has finished one season:
 - 1) - Broody Hen
 - 2) - Pullet
 - 3) Hen
- 4) Which one is the active ovary of chicken?
 - 1) The left ovary
 - 2) - The right ovary
 - 3) - Both (right & left)
- 5) It Is along tube through which the yolk passes and where the remaining portions of the egg are secreted:
 - 1) - Isthmus
 - 2) - Infundibulum
 - 3) - Magnum
 - 4) Oviduct
- 6) The Major constraints of poultry industry:
 - 1) - Inadequate healthcare
 - 2) - Nutrition and availability of quality feed
 - 3) - Spread of infectious diseases
 - 4) All options are correct
- 7) General precautions for proper Housing of poultry are:
 - 1) - Over crowding must be avoided
 - 2) - Poultry houses should be kept dry and well ventilated
 - 3) - All-in all-out system of rearing
 - 4) All options are correct
- 8) The minimum no of broiler birds /square meter for the first 5days (during brooding) are:
 - 1) 30 birds
 - 2) - 3-5 birds
 - 3) - 12-14birds
- 9) Feed of chickens should be free from:
 - 1) - Microbial contamination
 - 2) - Fungal growth
 - 3) - Mycotoxin
 - 4) All options are correct.
- 10) The temperatures for proper rearing of baby chicks for the 1st two days
 - 1) - 16c°
 - 2) - 24c°

- 3) 31 to 33c°
- 11) During application of vaccines (in drinking water) some points should be kept in mind like:
- 1) - The water should be free from chlorine or any drug
 - 2) - Waterer must be cleaned and washed to remove disinfectants
 - 3) - Add skim milk powder 2.5-3g or 30-50 ml milk / liter of water).
 - 4) All options are correct
- 12) The methods of generating formaldehyde gas include:
- 1) - KMnO₄+ Formalin (1:2)
 - 2) - Heating paraformaldehyde prills
 - 3) - Formalin vapor (A mixture of equal parts of water & formalin)
 - 4) All options are correct.
- 13) Suitable Vaccine Storage temperature is:
- 1) - 20 c°
 - 2) 2- 8 c°
 - 3) - -1c°
 - 4) - All options are incorrect
- 14) In Broilers (starter feed stuff from day old to 16 days contains):
- 1) (22%) protein & 2800 (Kcal/kg) ME
 - 2) - (18%) protein & 3200 (Kcal/kg) ME
 - 3) - (20%) protein & 3000 (Kcal/kg) ME
- 15) Crude protein for egg type chickens at 21-72 wks:
- 1) - 22%
 - 2) 18%
 - 3) - 12%
 - 4) - 25%
- 16) Environmental factors affecting poultry health:
- 1) Bad ventilation & or Increased Humidity
 - 2) - Lack of chicken exercise
 - 3) - Breeder nutrition
 - 4) - All options are correct
- 17) Calcium% for Grower Layers at (9-20) wks is 1.0 while Vit D IU/Kg is :
- 1) - 800
 - 2) 600
 - 3) - 1200
- 18) Scientifically The term culling means:
- 1) - Renew old feathers
 - 2) Removal of sick & or injured birds from the flock
 - 3) - Deworming
 - 4) - Brooding
- 19) High levels of maternal antibodies may cause vaccination failures:
- 1) True
 - 2) - False
- 20) Bad management during storage or incubation of eggs may cause:
- 1) - Premature embryo development
 - 2) - Embryo abnormalities
 - 3) - Embryo death
 - 4) All options are correct
- 21) Proteins of animal origin:
- 1) Dried blood, meat by- products, poultry feathers meal, and fish meal.

- 2) - Sesame meal
3) - Soybean meal
4) - Sunflower meal
- 22) Strategy for prevention & control of poultry diseases are:
1) - Cleaning and Disinfection
2) - Vaccination and Stress management
3) - Restriction for visitors and Disposal of poultry waste
4) All options are correct
- 23) Turning of eggs is prevented During:
1) - The first 3 days of incubation.
2) The last 3 days of incubation.
3) - The first 18 days of incubation
- 24) All the measures that should be taken to prevent disease called:
1) - Vaccination
2) - Surveillance
3) - Sanitation
4) Biosecurity
- 25) Disease agents may gain entry into poultry farms through:
1) - Recovered carriers
2) - Live bird markets
3) - Contaminated eggs, equipment and vehicles
4) All options are correct.
- 26) Good ventilation is important for brooding chicks for:
1) - To bring in fresh air & to remove r harmful gases
2) - To control the moisture level in the house
3) - To regulate temperature
4) All options are correct
- 27) Live microbial feed supplements which beneficially affect the host by improving its microbial balance:
1) Probiotics
2) - Prebiotics
3) - Organic acids
4) - All options are correct.
- 28) Combination of Probiotic & prebiotic is called :
1) - Lactobacillus species
2) - Propionic acid
3) Synbiotic
4) - All options are incorrect
- 29) Poultry waste disposal methods:
1) - Burial only
2) - Burning & burial
3) Burning , burial, Incineration, Compositing & Rendering
- 30) Deviation from normal function of bird body is called:
1) - Incubation
2) - Pathogen
3) - immunization
4) Disease
- 31) The cause of the disease is disturbance to the hens mineral/ electrolyte balance& lack of exercise .
1) - Heart attack
2) - Kidney damage

- 3) Caged - Layer Fatigue
- 4) Acute heart failure
- 32) For treatment of fatty liver syndrome:
- 1) Reduce the amount of dietary energy consumed
- 2) Contaminated feed must be replaced
- 3) Addition of vitamins & minerals specially calcium
- 4) All options are correct.
- 33) Management related factors that cause Pecking and Cannibalism:
- 1) Stocking density, insufficient nests and over crowding
- 2) High light intensity
- 3) Excessive Heat and poor ventilation
- 4) All options are correct.
- 34) Heat stress & early production of eggs are factors which lead to hypocalcemia (Calcium tetany):
- 1) True
- 2) False
- 35) The advantages derivable from culling of birds are:
- 1) Minimize the cost of production
- 2) Prevention of spread of diseases
- 3) More space is allowed for the remaining birds
- 4) All options are correct
- 36) Importance of poultry farm records:
- 1) To evaluate production methods
- 2) To keep all data pertaining to a poultry farm in a scientific manner
- 3) All options are correct
- 4) All options are incorrect
- 37) Poultry meat is graded based on:
- 1) Shape of the carcass and the amount of meat on the bones
- 2) Fat covering under the skin
- 3) Presence of specific defects
- 4) All options are correct.
- 38) The process of visual examination of an intact egg by source of light:
- 1) Fumigation
- 2) Candling
- 3) Moulting
- 4) Deworming
- 39) An aerobic biological process to degrade organic material of poultry waste:
- 1) Vermicomposting
- 2) Combustion
- 3) Composting
- 40) Causes of Urolithiasis:
- 1) Water deprivation , Excess dietary calcium & or Kidney damage
- 2) Feed contaminated by Ochratoxin
- 3) Infection with infectious bronchitis virus (nephrotropic strains)
- 4) All options are correct
- 41) Important of calcium:
- 1) Egg shell formation & skeleton development
- 2) Muscle contraction & nerve transmission
- 3) Absorption of Vit. B12 & Activate various enzymes
- 4) All options are correct

- 42) Some of the poultry meat defects include:
- 1) - Presence of pinfeathers & or skin discoloration
 - 2) - Cuts, tears & broken bones
 - 3) + All options are correct
