

قائمة الاسئلة

التدخل الجراحي والطبي الإكلينيكي - المستوى الثالث - قسم علاج طبيعي - كلية الطب والعلوم الصحية - برامج العلوم الطبية التطبيقية - الفترة الثالثة -

د/ وليد أمين عبدالله المخلافي

1) One of the following shock is due to low peripheral arteriolar resistance (vasodilatation)

- 1) - Hypovolemic shock
- 2) - Cardiogenic shock
- 3) - Obstructive shock
- 4) + Neurogenic shock

2) To calculate the extent of burn surface we use

- 1) - Rule of 7
- 2) - Rule of 8
- 3) + Rule of 9
- 4) - Rule of 10

3) The gallbladder is found in the

- 1) - Left hypochondrium
- 2) + Right hypochondrium
- 3) - Left iliac fossa
- 4) - Right iliac fossa

4) Routine preoperative preparation include the following EXCEPT

- 1) - History
- 2) - Examination
- 3) - Informed consent
- 4) + Brain CT scan

5) Presence of blood in the urine is called

- 1) - Pyuria
- 2) - Necroturia
- 3) + Hematuria
- 4) - Pneumaturia

6) All the following are signs and symptoms of compartment syndrome EXCEPT

- 1) - Pulselessness
- 2) - Pain disproportionate to injury
- 3) - Pallor
- 4) + Intact sensation

7) All the following are mentioned in the past history EXCEPT

- 1) - Past medical history
- 2) - History of blood transfusion
- 3) - Past surgical history
- 4) + Chief complain

8) The most common injury of the esophagus is

- 1) - Penetrating injury
- 2) - Blunt injury
- 3) + Iatrogenic injury
- 4) - Malignancy

9) The most common cause of acute pancreatitis is

- 1) - Malignancy
- 2) + GB stones
- 3) - Trauma
- 4) - Drugs

- 10) The lingula (of the lung) is part of the
- 1) - Right upper lobe of the lung
 - 2) - Right lower lobe of the lung
 - 3) + Left upper lobe of the lung
 - 4) - Left lower lobe of the lung
- 11) The primary cause of death in burnt patients is
- 1) - Constricting eschars
 - 2) + Infection
 - 3) - Scar formation
 - 4) - Contractures
- 12) Beck's triad of the cardiac tamponade include the following EXCEPT
- 1) - Hypotension
 - 2) - Muffled heart sounds
 - 3) - Distended neck veins
 - 4) + Decrease air entry
- 13) Empyema means
- 1) - Presence of blood in the pleural cavity
 - 2) + Presence of pus in the pleural cavity
 - 3) - Presence of chyle in the pleural cavity
- 14) One of the following statements is FALSE
- 1) + In acute hepatitis, elective surgery should not be postponed
 - 2) - In acute hepatitis, emergency surgery should not be postponed
 - 3) - In chronic hepatitis, elective surgery should not be postponed
 - 4) - In chronic hepatitis, emergency surgery should not be postponed
- 15) The first stage of wound healing is
- 1) - Remodeling phase
 - 2) + Inflammatory phase
 - 3) - Maturation phase
 - 4) - Proliferation phase
- 16) The most common site of bilharziasis is the
- 1) - Kidneys
 - 2) - Ureters
 - 3) + Urinary bladder
 - 4) - Urethra
- 17) Acute cholecystitis means
- 1) - Acute inflammation of the common bile ducts
 - 2) + Acute inflammation of the gallbladder
 - 3) - Acute inflammation of the liver
 - 4) - Acute inflammation of the spleen
- 18) In humeral shaft fracture there is injury of
- 1) + Radial nerve
 - 2) - Median nerve
 - 3) - Ulnar nerve
 - 4) - Axillary nerve
- 19) Blood loss in hemorrhagic shock between 30-40% of blood is
- 1) - Class I Hemorrhagic shock
 - 2) - Class II Hemorrhagic shock
 - 3) + Class III Hemorrhagic shock
 - 4) - Class IV Hemorrhagic shock

- 20) One of the following statements regarding peptic ulcers is TRUE
- 1) Duodenal ulcers are more common than gastric ulcers
 - 2) Duodenal ulcers carry more risk for malignancy than gastric ulcers
 - 3) Duodenal ulcers occur in older ages than gastric ulcers
 - 4) Duodenal ulcers occur in the antrum of the stomach
- 21) All the following are true regarding Acute Epidural Hematoma EXCEPT
- 1) There is usually mild trauma to the brain
 - 2) There is a lucid period
 - 3) Early surgery gives good results
 - 4) It is due to accumulation of blood between dura and arachnoid matters
- 22) All the following are functions of the skin EXCEPT
- 1) Protection
 - 2) Synthesis of vitamin K
 - 3) Synthesis of vitamin D
 - 4) Thermoregulation
- 23) All the following are characteristic of 2nd degree burns EXCEPT
- 1) They are moist and erythema
 - 2) There are blisters
 - 3) They are painless
 - 4) They often heal within 3 weeks
- 24) All the following regarding BPH are true EXCEPT
- 1) BPH means benign prostatic hypertrophy
 - 2) BPH means benign prostatic hyperplasia
 - 3) BPH is a normal aging process
 - 4) The origin of BPH is the transitional zone
- 25) The ulcers that occur in bed-ridden patients are called
- 1) Pressure ulcers
 - 2) Diabetic ulcers
 - 3) Venous ulcers
 - 4) Malignant ulcers
- 26) The most common type of shoulder dislocation is
- 1) Inferior dislocation
 - 2) Superior dislocation
 - 3) Anterior dislocation
 - 4) Posterior dislocation
- 27) The most common type of shock is
- 1) Septic shock
 - 2) Hemorrhagic shock
 - 3) Cardiogenic shock
 - 4) Anaphylactic shock
- 28) The medical treatment of hydatid cyst is
- 1) Metronidazole
 - 2) Albendazole
 - 3) Ceftriaxone
 - 4) Penicillins
- 29) Two or more contiguous rib fractures with two or more breaks per rib means
- 1) Pneumothorax
 - 2) Flail chest
 - 3) Lung cancer

- 4) - Chylothorax
- 30) All the following are part of local examination EXCEPT
- 1) - Inspection
 - 2) - Palpation
 - 3) - Percussion
 - 4) + Vital signs
- 31) The number of the thoracic vertebrae are
- 1) - 10
 - 2) - 11
 - 3) + 12
 - 4) - 13
- 32) Battle's sign means there is
- 1) - Anterior cranial fossa fracture
 - 2) + Middle cranial fossa fracture
 - 3) - Posterior cranial fossa fracture
 - 4) - Fracture of the skull vault
- 33) The most common intra-abdominal solid organ to be injured in blunt trauma is
- 1) - Liver
 - 2) - Kidneys
 - 3) + Spleen
 - 4) - Stomach
- 34) Erythema of the epidermis is considered
- 1) + First degree burn
 - 2) - Second degree burn
 - 3) - Third degree burn
 - 4) - Fourth degree burn
- 35) All the following are part of the lethal triad of hemorrhagic shock EXCEPT
- 1) - Hypothermia
 - 2) - Metabolic Acidosis
 - 3) + Metabolic Alkalosis
 - 4) - Coagulopathy
